DETAILED ACTION

Claim Rejections - 35 USC § 102

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 17-21,25,26 and 30-32 are rejected under 35 U.S.C. 102(e) as being anticipated by Kenoun et al (6275198).

Regarding Claims 17-21,25,26 and 30-32, Kenoun et al show in Fig. 3, a helical radiator for a portable radio comprising a radiator having a first end 52 connected to the radio, a second end 68, a feedback conductor 58 having a first end connected to the second end 68 of the radiator, the feedback conductor extending along the radiator in a first direction from the second end towards the first end of the radiator, the feedback conductor includes a second end 64 extending along the radiator in a second direction towards the second end of the radiator for tuning the frequency range of the antenna, all arranged as claimed. As to Claim 19, the turn is shown after portion 64. As to Claim 21, the 180 degree bend is shown at 64. As to Claims 30-32, a portable radio is implied for use with the stub antenna of Kenoun et al.

Allowable Subject Matter

2. Claims 22-24, 27 and 28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2821

3. Claim 29 is allowed.

Response to Arguments

4. Applicant's arguments filed 1/9/03 have been fully considered but they are not persuasive. Specifically, the two sections of the antenna in Kenoun et al do form and define the antenna radiator and the feedback conductor as claimed. The elements claimed are all shown in the Kenoun et al patent. Patentee does not have to use the same terms as applicant. It is the structure that is shown. A feedback conductor 58 is connected and has directions as claimed. The frequency modes of resonance are varied according to the length of the conductor 58 (see col. 4, lines 25 to col. 5, line 34). Since all structure is shown in the reference, the functional modes alleged here are applicable there.

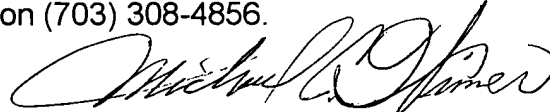

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
